2. Project Overview

Inclusa is a decentralized liquidity token on Solana, developed to act as a symbolic and functional asset that bridges fragmented crypto ecosystems. As part of the FIPX ecosystem, Inclusa enables programmable liquidity provisioning and serves as a base asset for creating stable swap routes between microcap and major tokens.

Its utility is rooted in high-efficiency, low-risk liquidity pools that simulate volume, enable price discovery, and support symbolic APR mechanisms. Designed with full control of trading ranges via concentrated liquidity pools on Raydium, Inclusa empowers emerging DeFi use cases and supports financial inclusion at the protocol level.

3. Supply and Tokenomics

- Token Generation Date (TGE): 08/12/2024
- Max Supply: 10,000,000,000 INC
- Total Supply: 10,000,000,000 INC
- Circulating Supply: 10,000,000,000 INC

- Decimals: 9
- Burned Wallet: N/A
- Locked/Vested Wallets: N/A

Initial Allocation:

- 100% allocated to ecosystem-controlled wallets
- No private/public sale
- No cliff or vesting
- 100% supply released at TGE for controlled liquidity provisioning

Additional Notes:

The full supply is actively used in symbolic liquidity strategies through ultra-concentrated pools on Raydium, serving as a liquidity backbone for other tokens like FIP. INC is used for simulations of swap volume, price support in micro-ranges, and potential DAO rewards.
