

# Inclusa (INC) - Whitepaper

Bridging Financial Gaps Through Liquidity.

Inclusa (INC) is a community-driven SPL token on the Solana blockchain created to serve as a universal liquidity bridge across different assets and communities.

With a total supply of 10 billion INC and a circulating supply of 1 billion, it is engineered for inclusion, accessibility, and long-term value.

Inclusa's main utility lies in its role as a liquidity pair token, especially in INC/FIP and INC/USDC pools on Raydium. By leveraging ultra-concentrated price ranges and active management, Inclusa enhances visibility, reduces slippage, and supports reliable market references for emerging assets.

As part of the broader FIPX ecosystem, INC stands for financial empowerment and seeks to integrate with community tools, governance systems, and real-world use cases.
